WEATHER OF CONCERN

Weather of Concern

- Breezy offshore flow along with above normal temperatures and low relative humidity will result in elevated fire danger for portions of Coastal and Southern California.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

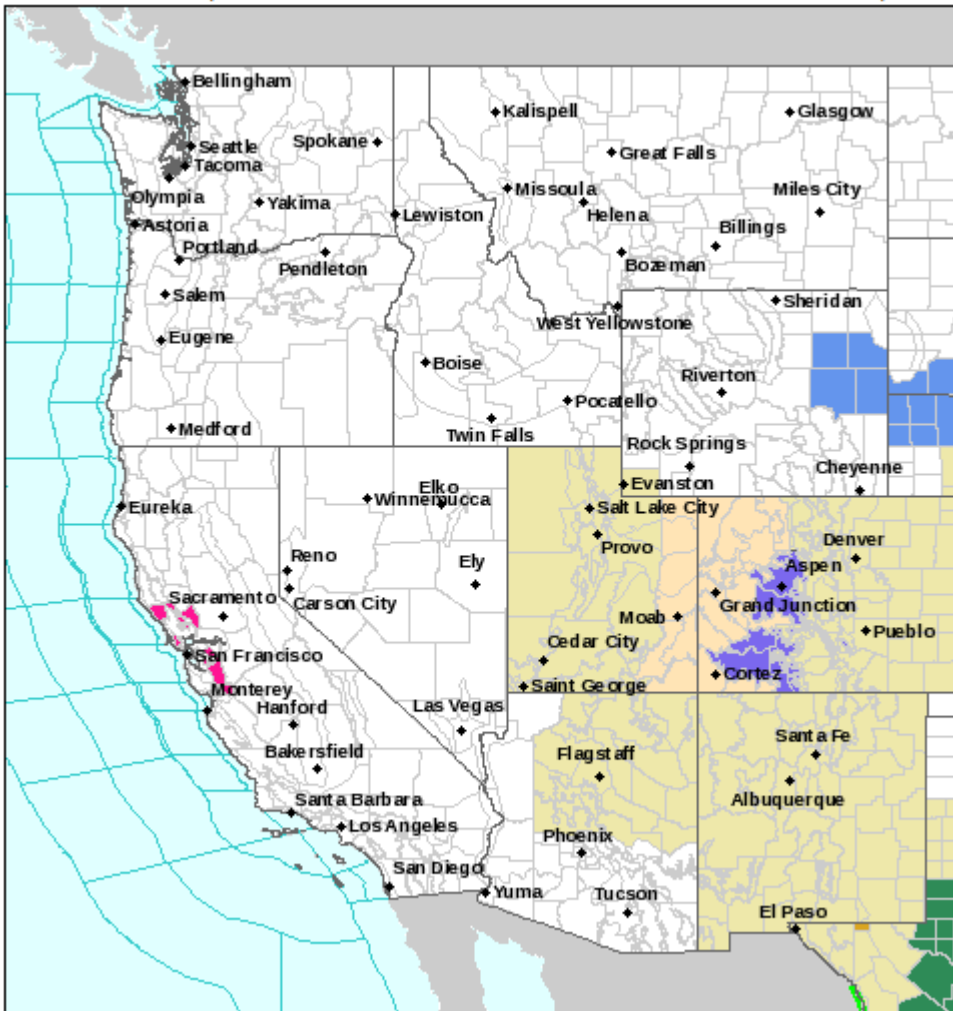

Strong high pressure over the Pacific Northwest will move into place overhead late today and tomorrow. Afternoon sea breeze winds will be fairly light late today and tomorrow. Temperatures will be 5-10 degrees above normal.

On Friday a weak cold front will sweep across our northern areas. Light rain is possible in Del Norte and Siskiyou Counties. The main effect will be a increase in clouds and SW-NW winds. Afternoon SW-W winds will gust to 25-35 mph along and east of the Cascade-Sierra crest Friday afternoon. This weekend will be dry and warm with another round of N-NE/Offshore winds, but winds are not expected to be strong enough to reach High Risk criteria.

SOUTHERN CALIFORNIA

Temperatures today will be a bit cooler this afternoon with most coastal and valley areas remaining in the 80s. Tomorrow and Friday, a ridge will rebuild over the area and the region will likely see valley readings return to the lower to mid 90s. Most long range model guidance depict another trough entering the Pacific Northwest over the weekend. This may bring cooler, onshore flow back into the area. By Sunday and Monday, temperatures may return to near or slightly below normal readings with night through morning low clouds. It may be windy along the central coast and the Antelope Valley each afternoon next week. No further offshore winds are expected the next 7 days.
